SPECIFICATION of TURF SEED MIXTURES

Sown in 2021 for TURF SALES during 2022 / 2023

SG 2	25 %	BARPRIUM	-	Amenity / Dwarf Perennial Ryegrass
	48 %	BARPEARL	-	Slender Creeping Red Fescue
	2 %	VIKTORKA	-	Slender Creeping Red Fescue
	25 %	SERGEI	-	Strong Creeping Red Fescue
	100 %			

- SG 2** - Formulated to provide a dense, compact sward with a vigorous root system, that has a high degree of wear tolerance, and recovers quickly from drought conditions.
A result of the inclusion of **Barprium**, a top - rated Amenity / Dwarf Perennial Ryegrass (according to the *Sports Turf Research Institute's* TURFGRASS SEED 2021 BUYERS GUIDE showing ratings for Shoot Density, Fineness of Leaf, Tolerance of Close Mowing, Disease, Cleanness of Cut etc.).
- Suitable for regularly used lawns, commercial landscaping, residential developments, orchards, areas where regular watering in dry conditions is a problem etc.
 - Highly recommended by the groundsmen & gardeners who have used it. Supplied by *Barenbrug*.

“Down - Graded” Seeded Turf - The “Headlands” of our fields where a few ‘wild’/ agricultural grasses have crept into the sward.....No guarantee on a uniform quality.
- Better than a Meadow / Field turf, but not as good as the SG2

7 / 21

N.B. ALL lawns, including those laid with SG2 or “**Down - Graded” Seeded Turf**, need regular and appropriate Maintenance using the correct tools and equipment (Mower with sharp blades, edging, watering with bar sprinklers when dry, monthly fertilising throughout the year using “*Growmore*” [a little and often applied during wet conditions is ideal], applying a *herbicide* when necessary to control weeds & moss, or *biological agents* to help control the spread of leatherjackets, chafer grubs, ants, moles etc.).

Settlement & Compaction, usually to varying degrees & severity over the lawn area, will also occur over time. However, providing Topdressing (with a suitable topsoil / sand mix) is carried out as soon as any dips appear, combined with Spiking / Aerating when necessary, then your lawn should stay in tip - top condition in the years to come.

The more T.L.C. a lawn receives the better it will look and the longer it will last!

Poa Annua (*Annual Meadow Grass*) is present to varying degrees in all lawns new & old and there is NO chemical control available.

Likewise there is now NO chemical control to combat **Leatherjackets** & **Chafer Grubs** so some may be present when turf is delivered.

Your old / existing lawn & garden will also harbour them to some degree.
